THE POPULAR AD-758V IS NOW AVAILABLE

Fall River, Massachusetts – October 17, 2006 - The AD-758V, which has been a preferred ADC dryer for many years, is now available with an improved 46% larger door opening. This popular 75-lb machine offers rugged, high performance and is ideal for on-premise applications.

Available in gas, steam or electric heat, the AD-758V is built for high production, and fast efficient drying. Gas units have a heat input of 175,000 Btu/hr and airflow of 1,000 cfm providing maximum performance. ADC incorporates an exclusive patented microprocessor control that provides simple and accurate operation. Automatic drying programs take the guesswork out of cycle selection and avoid wasting energy by automatically shutting the dryer off when the load is dry. For optimal performance the control also prompts the operator to clean lint screen when necessary.

For many years ADC has built its success on responding to market needs and feedback. “Our ability to respond quickly to the high demand for this machine is what ADC is all about. And, with our newly expanded product line we can now meet the needs of all of our customers” said John Olsen, V.P of Sales and Marketing.

About ADC

American Dryer Corporation designs and manufactures energy-efficient drying solutions for commercial coin-operated, on-premise and industrial laundry markets in 90 countries worldwide. ADC has devoted its business to providing dryers that perform better than any other. The result of this single-minded pursuit is well recognized by the ADC symbol, which is the hallmark that is trusted by laundries worldwide for total quality, the kind of quality that has helped establish American Dryer Corporation as the world’s largest sole manufacturer of commercial laundry dryers.
