ADC RELEASES NEW ON-PREMISE CONTROL

Fall River, MA – May 5, 2006 – American Dryer Corporation (ADC) has released the Phase 8 dual control for its On-Premise Laundry dryers. This new multi-functional microprocessor monitors the dryer to maximize performance, increase operational efficiency and reduce downtime.

With its user-friendly design, this state-of-the-art control is equipped with a Residual Moisture Control system (RMC), a new auto-dry feature that utilizes moisture sensors inside the dryer. The control also features a unique new mop head cycle, available on the SL-50 and SL-75 on-premise models. The mop head cycle, which is the first of its kind, utilizes a dual burner design to regulate heat and maintain an even flow and consistent temperature throughout the entire cycle.

This sophisticated control has the ability to be programmed in up to ten different languages with a multi-language option that displays a message in two languages alternating between the two languages every 5 seconds. Operation is virtually trouble-free, by simply scrolling through a short list of cycles. Once a cycle is selected the dryer will automatically start and with its simple one-touch button it can easily be stopped. The control even indicates when the lint drawer needs to be cleaned.

About ADC

American Dryer Corporation designs and manufactures energy-efficient drying solutions for commercial coin-operated, on-premise and industrial laundry markets in 90 countries worldwide. ADC has devoted its business to providing dryers that perform better than any other. The result of this single-minded pursuit is well recognized by the ADC symbol, which is the hallmark that is trusted by laundries worldwide for total quality, the kind of quality that has helped establish American Dryer Corporation as the world's largest sole manufacturer of commercial laundry dryers.
